

ORACLE CONSULTANCY · CHIEF-OF-STAFF COMMAND CENTRE

Operations & Master Reference Manual

The complete guide to the system that runs Oracle Consultancy's seven portfolio companies — what it does, how to use it, and how it is built.

-
- Single command centre for tasks, people, compliance, meetings and intelligence
 - Version 3 (V3) · Document generated 18 June 2026
 - Audience: the owner, staff, directors, and any future operator
 - Plain-language operating manual + quick reference + technical appendix

Contents

A manual in three layers: **Part A** tells you what the system is and how to get around it; **Part B** is a module-by-module quick reference; **Part C** is the technical & operations appendix for whoever maintains it.

1. What this system is

- The problem it replaces
- The seven companies
- Who uses it

2. Getting in — logging on & security

- Owner vs staff vs director
- Passwords, owner identity, passkeys

3. Finding your way around

- The navigation pill · the launcher · search

4. Tasks & the command centre

5. People & HR records

6. Companies & reference data

7. Documents & compliance

8. The HRMS suite (Tax & Legal, Assets, Leave, Pipeline, Registers, Organogram, Stock, Cleaning)

9. Meetings & the workbook

10. Letters & the Director Brief

11. Chat & outreach (Outbox, reminders, email, WhatsApp)

12. The Staff Portal

13. Intelligence — AI (ORI), voice & smart search

14. Settings, backups & day-to-day operations

15. Technical appendix — stack, schema, configuration

16. Glossary & quick-reference cheat-sheet

01 What this system is

Part A — Orientation

This is a single **Chief-of-Staff command centre** — one website that runs the day-to-day operations of Oracle Consultancy and its portfolio. It replaces a sprawling Excel workbook with a living system that captures work, tracks people and compliance, remembers meetings, and helps you make decisions.

The problem it replaces

Before this system, operations lived in spreadsheets: tasks, staff details, documents, leave, and notes were scattered and went stale. The command centre brings it all into one place with a memory — every task has a history, every person has a profile and compliance checklist, every meeting is saved, and the whole portfolio can be glanced at on a single brief.

It provides:

- Task capture and tracking, with a per-task timeline and a portfolio-wide activity feed;
- Company and portfolio **risk** views;
- Saved meeting notes, minutes and AI-assisted meeting intelligence;
- A full **HR & admin operating system** (people, documents, assets, leave, organogram);
- Per-person reminder drafts and outreach;
- **ORI**, the built-in assistant (Oracle Intelligence), and voice dictation.

The seven portfolio companies

The parent brand is **Oracle Consultancy** (renamed from "Oracle Group" in V2). Note that "Oracle Consultancy" is also one of the seven operating companies.

Code	Company	Sector
CO01	Dar Spices	Spices / FMCG
CO02	Cocozuri Chocolat	Chocolate / FMCG
CO03	Terra Green	Green / agri
CO04	Oracle Consultancy	Consultancy (also the parent brand)
CO05	PES Ltd	Services
CO06	MES Ltd	Services
CO07	Pamoja Plus	Services

TASK CODES

Each company has a two-letter prefix, so tasks read like **DS-001** (Dar Spices) or **OC-014** (Oracle Consultancy). Older **COxx-NNN** codes still redirect to the right task.

Who uses it

Role	What they see	How they sign in
Owner (you)	Everything — the full admin command centre across all seven companies.	Command Centre tab on /login
Staff	Their own tasks, documents, attendance, leave and profile, via the Staff Portal.	Staff Login on /login or /portal/login
Manager	The staff view plus their team's attendance and leave to approve.	As staff (role set in Settings)
Director	An operator view: the board brief across all companies, plus create tasks, events and messages.	As staff; auto-routed to the board

02 Getting in — logging on & security

Part A — Orientation

The admin side sits behind one owner password; staff have their own personal portal logins. Sign-in is one tabbed screen.

The single login screen (`/login`)

One screen, two tabs:

- **Staff Login** (the default tab) — staff sign in with an identifier (name or email) and their personal password.
- **Command Centre** — the owner signs in with the owner password.

If you set an **owner identity** (name/email in Settings), it becomes a required second factor on the Command Centre tab. Leave it blank and it stays password-only (no lockout risk).

Paskeys — Face ID, Touch ID, Windows Hello, fingerprint

Both the owner and staff can register a **passkey** so they sign in with their face or fingerprint instead of typing a password. The system stores only the public key — never your biometrics.

- **Owner:** register in Settings.
- **Staff:** register in the portal profile ("Sign in faster").
- The login screen offers a passkey button and autofill.

TWO COOKIES, TWO WORLDS

The admin side uses the `cos_admin` session; the portal uses `cos_portal`. They are separate — signing out of one does not affect the other.

What's protected

An edge "gate" checks every admin page before it loads. Staff portal pages are gated separately and only ever show a person their own data. Directors can view across companies but still cannot reach the owner-only admin tools.

GOOD HABIT

Set an owner identity and register a passkey on your main device. It makes the Command Centre both faster to enter and harder for anyone else to enter.

03 Finding your way around

Part A — Orientation

There is no menu bar. Everything is reached from one floating pill at the bottom of the screen — on phone, tablet and desktop alike.

The navigation pill

A single bottom-floating pill carries the main destinations and the page action. Its tabs:

Home Director Brief Task Management Workbook Chat HRMS + (page action) Search Theme

Chat is a primary tab on both the admin and the staff-portal pill, so messaging is always one tap away.

The HRMS launcher

The **HRMS** icon opens one centred "Go to" launcher listing every secondary destination, so you never hunt for a page:

Tax & Legal Organogram OECR (stock) Assets & Vendors Leave & Attendance OCR (cleaning) Companies
People Documents Letters & Letterheads Outbox Inbox Insights Settings

Search & the “+” action

- **Search** opens a fast command surface — type to jump to a task, person, company or page.
- “+” is the action for the page you're on (e.g. on Tasks it creates a task).
- **Theme** toggles light/dark.

ONE LOOK EVERYWHERE — “AURORA”

The whole system shares one design language called **Aurora**: calm liquid-glass panels, one cool-blue accent, centred layouts, iPhone-style toggles, gentle motion. Every page, pop-up and form looks and behaves the same way, so once you learn one screen you know them all.

Guided tours

The system has built-in **onboarding tours** — first-run guided walkthroughs and feature spotlights that introduce new buttons and panels once per person. Staff can replay them from their portal profile. New features self-guide automatically, so the system teaches itself as it grows.

04 Tasks & the command centre

Part B — Module quick reference

The home command centre (/) has three views: **Overview**, **Companies** and **Tasks**. Tasks are the heartbeat of the system.

WHERE

Home (/) → Tasks tab · new task at (/task/new) · a task opens as a drawer (/?tab=tasks&task=CODE).

Creating & tracking a task

- Press + (or "New task"). Give it a title, company, category, priority and assignees.
- The task gets a code like `DS-001` automatically.
- Open any task to see four tabs: **Overview**, **Conversation** (post updates), **History** (full audit trail), and **Edit**.
- On a phone the task drawer opens full-screen; swipe actions are available on rows.

Statuses, priorities & categories

Statuses	Not Started · In Progress · Under Review · Blocked · Waiting External · Escalated · Completed · Closed. <i>"Open" = anything except Completed/Closed.</i>
Priority / Risk	Critical · High · Medium · Low
Categories	Finance · Operations · Marketing · HR · Legal · Technology · Sales · Admin · Meetings · Strategy · Other

Timeline & activity feed

Every change is recorded. Each task has its own timeline; the Home **Timeline view** shows a portfolio-wide activity feed across all companies. Nothing is silently lost — deleting/closing is tracked.

EVERY NUMBER IS A DOOR

Throughout the system, counts and figures are clickable — tap a "3 overdue" figure to see exactly which three. Observe, then act.

05 People & HR records

Part B — Module quick reference

Every staff member, expat, outsider and candidate has a rich record: HR profile, documents & compliance, leave, assets, onboarding journey, reporting lines and history.

WHERE

[/people](#) (directory) · open a person for the cockpit drawer · printable form at [/people/form](#).

The person record

- **Profile:** department, role, start date, date of birth, nationality, IDs, address, emergency contact, probation end, and **work site + residence** (shared locations list).
- **Staff IDs** are computed live (e.g. [CZ-E04](#), [OC-D02](#)) from company prefix + role letter — not stored.
- **Person types:** local staff · expat · outsider · candidate. Each type drives its own document checklist.
- **Drawer tabs:** hero tiles (status at a glance) + Details, Leave, Manage, History.

Lifecycle automation

Event	What happens automatically
New staff added	An onboarding checklist + a document-compliance checklist are created.
Person archived	An offboarding checklist is created and assigned assets are auto-returned .
Probation approaching	Confirm passed / extend / create a review task from the drawer.
Field changed	Logged to the person's History (who/what/when).

Reporting lines & the organogram

- Primary manager is on the person; "also reports to" lines are secondary.
- Cards show manager + number of direct reports; the drawer lists direct reports.
- The full picture is the **Organogram** (see §8) — a portfolio flowchart with multi-parent reporting.
- You can set "also reports to" for several people at once via the bulk select bar in the directory.

Smart fill & the paper form

You can drop text or files onto a person and the system fills **blanks only** (it never overwrites, and always asks you to review). For staff with no system access, print the bilingual **EN/Swahili form** at [/people/form](#) (a field agent fills it by hand, you photograph it, and intake builds the profile).

06 Companies & reference data

Part B — Module quick reference

The Companies hub is the reference-data centre — the master lists everything else hangs off.

WHERE

`/companies` hub (tabs) · `/companies/[id]` for one company.

The hub tabs

Four lists, each with add / rename / **merge** / delete:

Companies	The seven companies + their branding/letterhead details (legal name, address, TIN, logo, signatory...).
Departments	Departments and per-company department heads.
Sites	Shared locations where staff live/work (not company branches).
Roles	Managed job-title list. Renaming/merging re-points everyone using it.

The company profile

`/companies/[id]` has Overview, Profile, Tasks, Timeline and Org. The company profile also carries the **board-level governance** data (cap table, beneficial owners, key persons, signatories, resolutions, risks, decisions) — kept out of the daily/weekly views but available for transfer packs.

MERGE, DON'T DUPLICATE

If two departments or roles mean the same thing, use *merge* — it re-points every person and record to the surviving entry, so you never end up with split data.

07 Documents & compliance

Part B — Module quick reference

One place for every document, wired to a per-person and per-company compliance checklist that scores to 100%.

WHERE

`/documents` · smart intake at `/inbox`.

How compliance works

- Each **person type** (and company) has a **requirement profile** → a checklist of required documents.
- When you upload a document, the system **auto-links** it to the matching requirement by category/title.
- You **verify** each item and can set a "valid until" review date; items lapse automatically when expired or stale (>180 days).
- The score updates everywhere immediately — person drawer, staff portal, and the Director Brief.

Uploading & tidying

Action	How
Single doc	Add via the full document form (owner = a person <i>or</i> a company).
Many at once	"Add several" — bulk multi-file upload, each reviewed in turn.
Duplicates	Recency-aware detection: "Keep both" or "Replace + archive".
Compilations	A multi-doc PDF is detected and can be split into linked parts.
Renewals	Replacing a doc hands the checklist tick from the old to the new one.

Smart intake (Inbox)

Drop pasted text and/or files into `/inbox` as a bundle, then press **Process**: the review queue files the documents to the right owner and enriches the person profile (blanks only, always reviewed). Compliance recomputes automatically.

CHASE GAPS IN ONE CLICK

Needs-attention rows have a "Chase" button that drafts a renewal reminder to the person or company in the Outbox — de-duplicated so you don't nag twice.

08 The HRMS suite

Part B — Module quick reference

A full HR & admin operating system, built on the principle **reuse, don't duplicate**. Reached from the HRMS launcher.

Tax & Legal (</hrms/command-centre>)

Recurring tax / statutory / legal obligations with cadence and a safety net so nothing slips.

Organogram (</hrms/org>)

The portfolio view is a layered flowchart: multi-parent reporting, role/seniority tiers, company shown as colour, shared-service roles in-flow (primary boss = solid line, extra bosses = dashed). Also per-company trees, a by-department view, and an "Everyone" web.

Assets & Vendors (</hrms/assets>)

- **Assets:** durable equipment assigned to a person, or shared to a company with a custodian. Auto-returned on offboarding. Per-asset history, PDF register export, handover receipts, retire/restore.
- **Vendors:** suppliers, contractors and landlords; their contracts live as documents.

Leave & Attendance (</hrms/leave>)

Two tabs, grounded in the Tanzania **Employment & Labour Relations Act 2004**:

Leave	Types, requests, approvals and balances. Entitlements: Annual 28/12mo · Sick 126 days/36mo (63 full + 63 half) · Maternity 84 · Paternity 3 · Compassionate 4. Working days are Mon–Sat minus public holidays.
Attendance	A month grid you brush-to-paint (Present/Absent/On leave/Holiday/Remote/Half-day/Sick), filter by company, "mark all Present today". On-leave/holiday days auto-fill. Staff self-check-in from the portal.

Applications in progress (</hrms/pipeline>)

A kanban of in-flight bureaucracy (permits/visas/licences): To Apply → Applied → Control No. Issued → Paid → Receipt Received → Issued. Attach a supporting document at any stage.

Commitments register (</hrms/registers>)

Leases, insurance and commercial contracts. The system computes **notice-by = end date – notice days** and flags when notice is due soon.

Stock & cleaning

- **OECR** (</hrms/oecr>) — Office Equipment Control Registry: consumable stock control (items, purchases, issues).
- **OCR** (</hrms/ocr>) — Office Cleaning Registry: a daily cleaning checklist.

09 Meetings & the workbook

Part B — Module quick reference

The Meeting Workspace turns meetings into saved business memory; the Workbook holds meetings, notes and to-dos together.

WHERE

Meeting Workspace `/meeting` · Workbook `/workbook`.

The Meeting Workspace can

- Save title, company, date, attendees, raw notes and minutes
- Take **voice dictation** into notes
- **Clean** rough notes
- **Generate minutes**
- **Extract decisions**
- **Extract risks**
- **Draft a follow-up**
- **Extract action items** → bulk-create tasks
- Link created tasks back to the meeting
- Search/filter meeting history

IT FEEDS THE ASSISTANT

Saved minutes and raw notes become context ORI can draw on when you ask it questions — so the meeting record is also institutional memory.

Workbook

`/workbook` brings **Meetings · Notes · To-do** into one place. To-dos can be tagged as onboarding/offboarding journey steps that show up on the relevant person.

10 Letters & the Director Brief

Part B — Module quick reference

Director Brief (`/brief`)

A glanceable portfolio report: headcount, compliance, risks, an HR section, completed/closed this month, statutory obligations and leave liability.

- Share via **WhatsApp / Email / Copy**, or print to PDF (detailed per-company tables are print-only).
- Directors get a "Download PDF" button on their portal board.

Letters (`/letters`)

System-wide branded PDF letters with a Draft → Issue lifecycle.

- Per-company **letterhead** set on the Letterheads tab: typed fields, a designed header+footer image, or a full-page A4 background.
- **Draft** → **Issue** freezes a letterhead snapshot and stamps a reference (`PREFIX/INV/YYYY/NNN`) — reprints are identical.
- Full body editing; PDF via in-place print; optional Outbox draft; no auto-send.
- First template is the **Invitation** letter (auto-pulls invitee name, nationality, passport, DOB, role).

ADDING A NEW LETTER TYPE

It's a small code change: add an entry to `LETTER_TEMPLATES` and a `buildBody` function in `src/lib/letters.ts`.

11 Chat & outreach

Part B — Module quick reference

Chat (`/chat`) · portal twin (`/portal/chat`)

Free-standing messaging, separate from task updates: direct messages and ad-hoc groups, everyone-to-everyone.

- WhatsApp-style messenger: full-screen on mobile, two-pane glass card on desktop.
- Optimistic send, read receipts, typing indicator, inline image previews.
- Real-time delivery (with a polling fallback). Notifications deep-link into the thread.

Outbox & reminders (`/outbox`)

Persisted message **drafts** — per-person reminders, renewal chases, director messages. Nothing sends automatically; each draft gives you a WhatsApp / email / SMS deep-link to send yourself.

Email & WhatsApp automation

Channel	Status
Email	Built and wired (Gmail SMTP / Resend). Inert until provider credentials are set in the environment; directors can then be made to send "as themselves".
WhatsApp	Sandbox-proven on Twilio, not yet live. Today the system produces <code>wa.me</code> deep-links (you tap send). Automated sending needs Twilio business verification, an approved number and message templates, then three environment variables.

OWNER ACTION TO GO LIVE

Both email and WhatsApp are wired but inert until you add the provider credentials in Vercel. See the project memory notes (`emailwork` , `director_surface_plan`) for the exact steps.

12 The Staff Portal

Part B — Module quick reference

The portal is a first-class surface for staff — same Aurora look as the admin side, but it only ever shows a person their own data.

WHERE

`/portal` · sign in at `/portal/login` · profile at `/portal/profile`.

What staff can do

- See **only their own tasks**, post updates, and make limited status moves (never Completed/Closed).
- **Your documents** — see their compliance checklist and upload onto gaps.
- **Your attendance** — self check-in with a week strip; a check-in pop-up auto-opens once a day.
- **Your leave** — view balances and request leave.
- Onboarding journey, assigned equipment, and passkey setup.

Portal roles

A person's portal role is set in Settings → Staff portal access. There are four:

staff	Own tasks, documents, attendance, leave and profile only.
manager	Staff view + Team attendance today, Leave to approve, a team roster (compliance/onboarding scores), and can create tasks for their company.
hr	Group-wide task visibility and creation across all companies (no single-company limit).
director	The board brief across all companies; create tasks group-wide, schedule events/meetings, and draft messages. Auto-routed to the board on sign-in.

Accessibility & comfort

The portal profile carries accessibility controls — **text size**, **reduced motion** and **density** — so staff can tune the experience on their own device.

PARITY RULE

The portal keeps pace with the admin side automatically: shared styles, motion and components flow to it. It deliberately drops anything that would expose other people's data (the command surface, ORI, admin drawers).

DATA IS NEVER DELETED

Revoking access, changing a role, or archiving a person keeps all their data. Access control and data are separate.

13 Intelligence — ORI, voice & search

Part B — Module quick reference

ORI — the assistant (Oracle Intelligence)

"Ask COS / ORI" answers questions over your real data — tasks, meetings, documents and people — and cites what it used (task codes, meeting title + date). It never invents data.

- Recall is synonym-aware and relevance-ranked, with an honest "N tasks · M meetings" count.
- There is an AI master switch; when AI is off, features degrade gracefully.

Voice intelligence

Voice is a shared layer, not just a microphone button. The pattern is **"speak rough, save polished"** — you dictate and the system tidies it up.

- Used in meeting notes, quick capture and task updates.
- Languages: English (en-GB), Swahili (sw-TZ), Hindi (hi-IN), Gujarati (gu-IN).
- You can teach ORI names and phrases into a voice dictionary for better accuracy.

Smart / semantic search

Beyond keyword search, the system has a hybrid search that understands meaning (it indexes tasks, documents, meetings and people, blending full-text and vector search). It is **opt-in — off by default**; it needs a one-time setup (deploy the embedding function and run the backfill — see [SEMANTIC_SEARCH.md](#)) and is then toggled on in Settings. It is strongest in English; reliable multilingual support (Swahili/Hindi/Gujarati) is a pending cost decision (see appendix).

AN "OPERATING BRAIN", NOT MAGIC

The intelligence is grounded: it works from your records and cites them. If something isn't in the system, ORI won't pretend it is.

14 Settings, backups & day-to-day operations

Part B — Module quick reference

Settings (`/settings`)

Organised into icon-tile cards with a section nav. Key things you control here:

- Owner identity (the optional second factor) and owner passkeys.
- **Staff portal access** — set/reset a person's password, change their role, revoke access.
- AI master switch and "high quality AI" toggle; voice language and dictionary.
- Director outreach pause/resume (a governance kill-switch).

Backups & safety

What	How
Portable backup	<code>npm run db:backup</code> writes a per-table JSON snapshot to <code>backups/</code> .
Restore	<code>npm run db:restore -- <folder></code> .
Primary safety net	Supabase cloud backups (see <code>BACKUP.md</code>).
Error monitoring	Sentry (errors only) — active when the DSN is set.

GOLDEN RULE

Run `npm run db:backup` before any migration or bulk database change.

Routine operations

- **Daily:** work tasks, check the Home overview and notifications, approve leave, action needs-attention rows.
- **Weekly:** review the Director Brief, chase compliance gaps, check the pipeline and commitments register for notice-due items.
- **Monthly:** review attendance, completed/closed work, and confirm backups are healthy.

15 Technical appendix

Part C — For whoever maintains the system

Technology stack

Layer	Technology
Framework	Next.js 16 (App Router), React 19, TypeScript 5
Database	Supabase Postgres via the pooler (port 6543); Drizzle ORM 0.45 + postgres.js
Styling	Tailwind v4 tokens from <code>globals.css</code> ; the "Aurora" design kit
AI	Groq Cloud (<code>llama-3.1-8b-instant</code>); pgvector for semantic search
UI libs	next-themes, framer-motion, lucide-react, cmdk, Radix primitives
Hosting	Vercel (functions pinned to the EU region to match the database)

Critical configuration — do not break

- `src/db/index.ts` must keep `prepare:false` and `max:1` (required for PgBouncer transaction mode).
- `DATABASE_URL` uses the Supabase pooler on port 6543.
- The admin edge auth gate lives in `src/proxy.ts` (the Next-16 `proxy` convention, formerly `middleware.ts`). Its `secret()` derivation must stay identical to `src/lib/admin-auth.ts` and `src/lib/portal-auth.ts`.
- All wall-clock columns are `timestamptz`; writes use `.toISOString()` (UTC), times render in the viewer's local zone (Dar es Salaam, UTC+3).
- Never `rm -rf .next` while the dev server is running (it corrupts the build cache).

Schema areas (high level)

Core: companies, departments, people, tasks (+ assignees, updates). Reference: sites, job_titles, department_heads, reporting_lines. Meetings: meetings, meeting_tasks. Governance/transfer-pack: facts ledger, cap_table, beneficial_owners, key_persons, signatories, resolutions, risks, decisions, pipeline, commitments. HR: requirement_profiles/items, person_requirements, assets, vendors, leave_types, leave_requests, attendance, public_holidays. Documents: documents, inbox, document_links. Letters: letters. Stock/cleaning: stock_*, cleaning_*. Outreach: reminders, outbox. Chat: chat_threads/participants/messages/mentions. Auth: webauthn_credentials. System: audit_log, corrections, settings, notifications, system_events, daily_snapshots, undo_tokens. Full detail in `memory/database_schema.md`.

Developer workflow

Type-check	<code>NODE_OPTIONS=--max-old-space-size=4096 npm exec tsc -- --noEmit</code>
Unit tests	<code>npm test</code> (Vitest) — pay/leave/derive/requirement-match/staff-id logic

Where the knowledge lives

The project's living documentation is in `CLAUDE.md` (instructions) and the `memory/` folder (e.g. `v3_plan.md`, `portal.md`, `hrms.md`, `auth_login.md`, `organogram.md`, `letters.md`, `chat_system.md`, `database_schema.md`, and the audit logs). The design rules are in `DESIGN_SYSTEM.md`.

PENDING OWNER DECISIONS

(1) Email + WhatsApp go-live credentials in Vercel; (2) durable multilingual search container (~£3–7/mo); (3) enable GitHub Dependabot security alerts; (4) confirm Supabase backup/PITR plan.

16 Glossary & cheat-sheet

Part C — Quick reference

Glossary

Term	Meaning
COS	Chief-of-Staff — the system itself.
ORI	Oracle Intelligence — the in-app AI assistant.
Aurora	The design language used across every screen.
HRMS	The HR & admin suite (people, assets, leave, organogram, etc.).
OECR / OCR	Office Equipment Control Registry (stock) / Office Cleaning Registry.
Open task	Any task not Completed or Closed.
Transfer pack	The board-level/governance data set kept for handover and compliance.
ELR Act	Tanzania Employment & Labour Relations Act 2004 — the basis for leave rules.
Person types	local staff · expat · outsider · candidate — each with its own document checklist.
Notice-by	For commitments: end date – notice days (when you must give notice).

Page cheat-sheet

Page	What it's for
/	Command centre: Overview · Companies · Tasks
/brief	Director Brief (portfolio report, shareable + PDF)
/workbook	Meetings · Notes · To-do
/meeting	Meeting Workspace (AI minutes, action items)
/people · /companies	People directory · Companies & reference data
/documents · /inbox	Documents & compliance · smart intake
/hrms/leave	Leave & Attendance
/hrms/assets	Assets & Vendors
/hrms/org	Organogram
/hrms/pipeline · /hrms/registers	Applications in progress · Commitments register
/hrms/command-centre	Tax & Legal (statutory obligations)
/letters	Branded PDF letters + letterheads

/chat · /outbox	Messaging · outreach drafts
/portal	Staff portal (own tasks, attendance, leave, docs)
/settings	Identity, portal access, AI, backups

Oracle Consultancy — Chief-of-Staff System · Operations & Master Reference Manual · V3 · 18 June 2026.
This manual is a snapshot; the living source of truth is [CLAUDE.md](#) and the project [memory/](#) folder.
